

TriCord User Guide

A practical guide for Owners, Admins, Members, and Guests using TriCord to organize work, tasks, knowledge, rooms, and optional business records.

For Free, Plus, and Pro users. Last updated July 2026.

The screenshot displays the TriCord user interface. On the left is a sidebar with a 'TriCord Owner' profile and navigation buttons for 'Active Feed', 'Tasks', 'Knowledge ROOMS', and 'General'. The main content area is titled 'HUB CarePro VA' and includes a search bar and a plus icon. Below the title are three summary cards: 'OPEN POSTS 5', 'KNOWLEDGE 8', and 'OPEN TASKS 11'. The main feed shows two active items: 'Welcome client onboarding' with the subtext 'Keep notes, files, and replies in one place.' and 'Weekly reporting SOP' with the subtext 'Turn repeatable work into knowledge.'

Important: TriCord provides collaboration and business productivity tools. Optional business modules are recordkeeping and organizational tools only. TriCord is not a payroll processor, tax advisor, legal advisor, HR consulting service, PEO, employer of record, or healthcare compliance platform. Customers remain responsible for complying with applicable labor, payroll, privacy, tax, employment, and industry laws.

1. What TriCord Is

TriCord is a connected work hub for SMEs and startup teams. It keeps conversations, tasks, knowledge, files, email context, rooms, and optional business records organized in one place so teams can reduce scattered follow-ups and keep work accountable.

- Use Hubs for each company, client, organization, or major operating group.
- Use Rooms to separate work by department, client, project, process, or team.
- Use Active Feed posts for focused topics that need replies, files, decisions, and next steps.
- Use Tasks to plan work in board, list, and calendar views.
- Use Knowledge to document SOPs, FAQs, troubleshooting steps, and best practices.
- Use optional Plus/Pro business modules for attendance, employee records, payroll-preparation records, and business reports when appropriate.

TriCord is intentionally not a payroll, tax, legal, HR consulting, HIPAA, or regulated healthcare system. Keep protected health information, bank login credentials, full payment card numbers, and other restricted data out of TriCord unless TriCord has expressly agreed in writing to support that data type.

2. Roles at a Glance

Role	Typical purpose	Common access
Owner	Controls the Hub, billing, plan, settings, rooms, roles, and sensitive business modules.	Can manage Hub settings, members, rooms, billing, permissions, and enabled business records.
Admin	Helps manage daily operations where the Owner grants permission.	Only sees admin/business features explicitly granted to the role.
Member	Participates in rooms, posts, tasks, knowledge, and assigned work.	Can create posts/tasks/knowledge where allowed, view own employee records, and clock in/out if enabled.
Guest	External collaborator with limited room access.	Can only see invited content and should not access internal business records.

3. Navigation and Core Workflow

Most teams start in the Active Feed. Create a post, discuss it in context, assign follow-up work, save reusable learning to Knowledge, and archive the post when the outcome is complete.

- Sidebar: switch between Active Feed, Tasks, Knowledge, optional Business modules, Admin, Rooms, and your account menu.
- Header: shows the current Hub and actions relevant to the page.
- Discussion panel: opens when a post is selected and keeps replies attached to the original topic.
- Rooms: create focused spaces for sales, HR, projects, clients, support, onboarding, or internal operations.

4. Recommended Daily Flow

Step	Action	Why it matters
1	Create or select a Room.	Keeps work separated by team, client, department, or process.
2	Create a focused post.	Prevents work from disappearing in endless chat.
3	Discuss with context.	Replies, files, reactions, and email context stay attached to the topic.
4	Assign tasks.	Every next step can have an owner, status, priority, and due date.
5	Document repeatable answers.	Turn recurring explanations into knowledge articles and SOPs.
6	Archive completed outcomes.	Keep the active feed clean while retaining history.

5. Rooms and Active Feed

- Create Rooms for repeatable groups of work such as General, Sales, HR, Operations, Clients, or Projects.
- Owners and Admins can rename, pin, sort, move, and delete Rooms. Members can manage Rooms they created when permissions allow.
- Use All posts to see activity across the Hub, or select a Room to narrow the feed.
- Use post status to separate Active, Assigned, and Archived work.
- Use archive instead of delete when you want to preserve the business record but remove it from active work.

6. Discussion Panel

- Click a post to open its discussion panel.
- Reply with context, attach files up to the configured limit, react, copy, or forward messages inside TriCord.
- Use the side-panel toggle or keyboard shortcut to hide/show the discussion panel when working on other pages.
- When a post is deleted or archived, other users should see the update through realtime syncing without manually refreshing.

7. Tasks

- Board view: organize work by status such as To Do, In Progress, In Review, Done, and Canceled.
- List view: scan task title, project, assignee, status, priority, due date, and actions.
- Calendar view: review due dates and day-specific workload.
- Completed or canceled tasks can be archived when the work is done.

8. Knowledge Base

- Use Knowledge for SOPs, how-to guides, FAQs, troubleshooting notes, best practices, policies, checklists, and reusable answers.
- Everyone except Guests can read knowledge articles. Owners and permitted Admins can edit or delete official articles.
- Members can create knowledge posts where allowed and request changes when direct editing is restricted.
- Keep article titles plain and searchable, for example: Client onboarding checklist or How to submit weekly reports.

9. Email Forwarding and Email Commands

Email features are available on Plus and Pro Hubs. They are designed to bring important email context into TriCord without forcing the team to copy and paste messages across tools.

What email forwarding does

- Each Room can have a Room email address, such as careprova-sales@room.tricord.cc.
- Forward an email to the Room address to create a focused post in that Room.
- If another email arrives with the same normalized subject in the same Room, TriCord can append it to the existing post instead of creating duplicate work.
- The sender, subject, body, and attachments are stored with the post when the inbound email service provides them.
- Use this for client requests, support escalations, approvals, vendor updates, sales follow-ups, and any email that should become team-visible work.

10. Outgoing Email Commands

- From a discussion reply, use an email command pattern such as @recipient@example.com or cc: teammate@example.com when the feature is enabled.
- TriCord sends the message through the configured outbound email service using the Room address as the sender identity where supported.
- Use email commands only when you have permission and a lawful business reason to contact the recipient.
- Email delivery depends on DNS, sender reputation, spam filtering, and the recipient email provider. TriCord records sent-message context, but external delivery may still be affected by third-party mail systems.

Tip: Email forwarding is best for turning external messages into actionable TriCord work. For ordinary file sharing, posting a Google Drive, Dropbox, or OneDrive link directly in the discussion is usually simpler.

11. Optional Business Modules

Attendance, Employee Records, Payroll Preparation, and Business Reports are Plus/Pro features. Owners can enable them from Hub Settings when the Hub has a paid plan. These modules are organizational recordkeeping tools only.

Module	Purpose	Important notes
Attendance	Clock in/out records and optional per-employee requirements such as GPS, IP, device information, photo verification, workdays, and grace periods.	Employees should receive required notices. Owners/Admins need permission to view evidence or correct records.
Employee Records	Profiles, contact details, emergency contacts, leave requests, documents, performance records, and compensation records.	Sensitive fields should be limited to Owners and permitted Admins. Members generally view their own records.
Payroll Preparation	Preparation periods, compensation inputs, employee-specific earnings/deductions, and draft summaries.	TriCord does not process payroll, calculate taxes, file returns, or provide payroll/tax/legal/HR advice.
Business Reports	Operational summaries for attendance, leave, payroll-preparation data, tasks, and enabled business records.	Reports are only as accurate as the data entered by the organization.

12. Attendance Policy Notices

- GPS location: employees are notified that location may be recorded when clocking in or out.
- IP address: employees are notified that their IP address may be recorded.
- Device information: employees are notified that device details may be recorded.
- Geofence restriction: employees are notified that they may need to be within the approved work location.
- Selfie verification: employees are notified that a photo may be recorded for attendance review.

13. Employee Records

- **People:** Owners/Admins manage employee profile details such as name, contact number, address, department, position, employment type, status, and manager.
- **Leave:** Members can submit leave requests; Owners/Admins can approve, deny, edit, or delete according to permissions.
- **Documents:** Store employment-related documents when appropriate. Members can view their own documents and request changes if direct editing is restricted.
- **Performance:** Track goals, reviews, achievements, warnings, and notes. Members can view their own records and request updates where needed.
- **Compensation:** Store encrypted compensation records, payment destination, and payroll/tax notes for recordkeeping only.

14. Compensation Records

It can be appropriate to store compensation amount, payment destination, government ID fields, and payroll/tax notes in TriCord only when the organization has a legitimate business need, has configured proper access controls, and understands that the information is sensitive recordkeeping data. Avoid storing bank login credentials, full payment card numbers, or unnecessary sensitive information.

- Use Payment destination for the place or method used by the organization for payment records, not for bank login details.
- Use Payroll/tax note for internal recordkeeping notes only. TriCord does not verify tax treatment.
- Use custom compensation items for country- or company-specific fields such as Medicare, Social Security, SSS, Pag-IBIG, PhilHealth, withholding tax, allowances, or deductions.
- Review payroll-preparation records with your payroll provider, accountant, tax professional, legal advisor, or HR advisor before acting on them.

15. Admin, Roles, and Permissions

- Owners manage Hub access, invitations, roles, and plan/billing settings.
- Admins only see the features and actions they are allowed to use. If a feature has no purpose for a role, it should be hidden.
- Members should not see admin-only controls. Guests should only see invited collaboration surfaces.
- Invite by role lets an Owner invite Admins, Members, or Guests. Billing impact depends on the active plan and Stripe checkout/billing configuration.
- People and Roles organizes users by Admins, Members, and Guests for quick role management.

16. Hub Settings

- Free Hubs include the core collaboration features: Active Feed, Rooms, Tasks, and Knowledge.
- Plus and Pro Hubs can enable optional business modules from Hub Settings.
- Business module settings are Hub-level settings. Enabling a module affects the current Hub, not every Hub the user belongs to.
- Business module settings should be reviewed before inviting employees or external collaborators.

17. Account Menu and Personal Settings

- Use Personalization to switch light/dark mode and choose the Hub accent color.
- Use Profile to update full name, nickname, photo, contact details, time zone, and profile information.
- Use Settings for Hub access details and Owner-visible Hub settings.
- Use Help to open the user guide, learn features, and report problems.
- Use Log out when leaving a shared or public device.

18. Plan Comparison

Capability	Free	Plus	Pro
Owned Hubs	1	5	Unlimited
Joined Hubs	Unlimited	Unlimited	Unlimited
Members	10 included	100 included	Unlimited fair use
Guests	5	50	Unlimited fair use
Rooms	10	Unlimited	Unlimited
Message history	90 days searchable	Unlimited	Unlimited + custom retention
Hub storage	1 GB	100 GB	1 TB
Max file upload	20 MB	20 MB	20 MB
Email forwarding	Not included	Included	Included
Business modules	Not included	Attendance, Employee Records, Payroll Prep	Advanced controls and reports
Support	Help center / email	Priority email	Priority support

19. Security, Privacy, and Responsible Use

- Invite only the people who need access and assign the least-privileged role that lets them do their work.
- Use Guests for external collaborators so they only see specific Rooms and content.
- Avoid storing protected health information, full card numbers, bank login credentials, or regulated data unless TriCord has expressly agreed in writing to support that data type.
- Give employees any notices required before enabling GPS, IP, device, geofence, photo verification, employee records, or compensation records.
- Use strong passwords, keep email accounts secure, and remove access immediately when someone leaves the organization.
- Review permissions regularly, especially for Admins with business module access.

20. Best Practices for SMEs and Startups

- Create fewer Rooms at first: General, Sales, Operations, HR, and one client/project Room if needed.
- Name posts around outcomes, not vague chat topics. Example: Approve July client onboarding checklist.
- Assign tasks from discussions immediately so next steps do not get lost.
- Archive posts when the outcome is complete, but avoid deleting business records unless necessary.
- Turn repeated answers into Knowledge articles weekly.
- Enable business modules only when your team has a clear recordkeeping workflow and understands the legal/compliance responsibilities.

21. Frequently Asked Questions

Question	Answer
Can one email be a Member in one Hub and Owner in another?	Yes. Roles are assigned per Hub. The same user can be a Member in one Hub and an Owner in another.
Does TriCord process payroll?	No. TriCord organizes payroll-preparation records only. It does not run payroll, calculate taxes, file forms, or provide advice.
Does TriCord provide legal, tax, HR, or compliance advice?	No. Customers remain responsible for complying with applicable laws and should consult qualified professionals.
Can I use TriCord for patient records or HIPAA workflows?	No. TriCord is not designed for protected health information in this release.
Why do some users not see a page or button?	TriCord hides features that do not apply to the user role, plan, enabled modules, or granted permissions.
Why are business modules missing on Free?	Attendance, Employee Records, Payroll Prep, and related Business Reports are Plus/Pro features.
What happens when I forward email to a Room?	TriCord creates or updates a post in that Room so the team can discuss, assign, and archive the work.
What if a file is too large?	Files over the single-file upload limit should be shared through a cloud storage link such as Google Drive, Dropbox, OneDrive, or another approved provider.

22. Getting Help

- Open Help from the account menu for feature explanations and this PDF guide.
- Use Report a problem to send a categorized support request to the Hub Owner or support contact.
- For billing issues, Owners should use Upgrade Plan or Manage Billing from the account menu.
- For legal, payroll, tax, HR, privacy, or compliance questions, consult a qualified professional in your jurisdiction.
